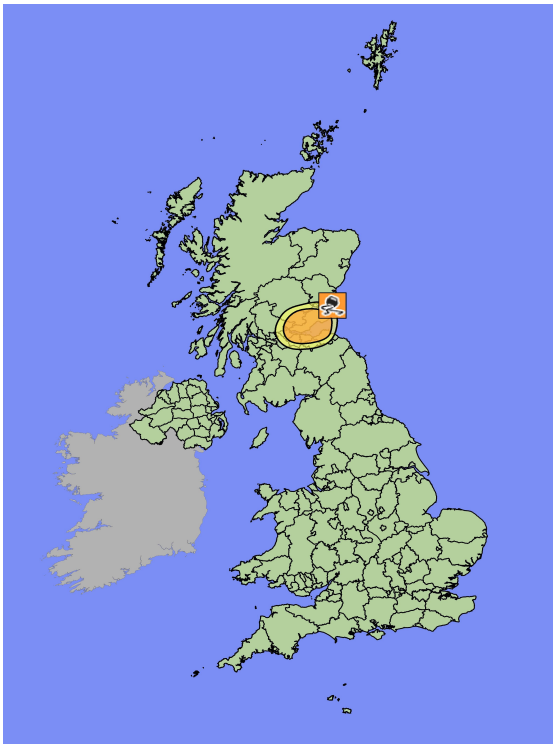
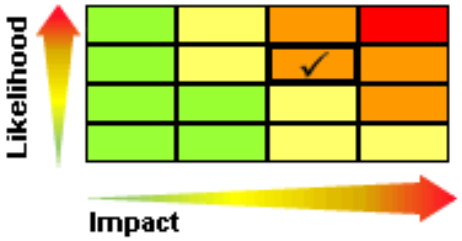
National Severe Weather Warning Service





Chief Forecasters Assessment
As the band of precipitation clears, cloud is expected to break allowing road temperatures to suddenly drop below zero, with ice forming widely as a result. The rapidity of the temperature fall means that there is unlikely to be sufficient time for many roads to be salted to prevent this happening, and even if roads are salted beforehand this salt could well be washed away by the rain.

The Met Office have issued an **Amber Warning** of **Ice**

Valid from **20:00 on Tue, 06th Dec 2011** until **10:00 on Wed, 07th Dec 2011**

Outbreaks of rain, sleet and snow will clear during this evening, with a risk of widespread ice forming very soon afterwards. The public should be aware that this could cause significant disruption to travel.
